Subject: Willamette Superfund Plan

The current draft for cleanup of the Portland Harbor Superfund Cleanup Plan leaves far too much of the river contaminated.

I believe that at least 1,000 acres of polluted sediment be removed from the river.

The cleanup plan must result in the removal of the fish consumption advisory so that eating fish from the lower Willamette River is as safe as eating fish from anywhere else in the Willamette River system, and this should occur within a 10-20 year time frame.

Creating a toxic-waste disposal dump in our river is not an acceptable solution. Dredged toxic sediments should be taken to an appropriate landfill.

Lastly, entities liable for the pollution must be held accountable, and they should pay for a comprehensive cleanup that will protect the health of our communities, our environment, and our wildlife.

Thank you for your consideration.
